SUMMARY

Data Engineer with 7 years of experience building and maintaining data pipelines across fintech and e-commerce domains. Comfortable owning the full stack from ingestion to BI layer.

EXPERIENCE

Stripe — Data Engineer | Mar 2021 - Present

- Designed and maintained 40+ dbt models powering executive dashboards used by 300 internal stakeholders
- Reduced pipeline failure rate from 18% to 2% by rebuilding legacy Airflow DAGs with modular task groups
- Cut data warehouse costs by \$220K annually through partition pruning and clustering optimizations in BigQuery
- Led migration of 6 legacy ETL jobs from Informatica to dbt Core, completing 3 weeks ahead of schedule

Shopify — Junior Data Engineer | Aug 2018 - Feb 2021

- Built ingestion pipelines for 12 third-party data sources using Python and Google Cloud Dataflow
- Automated daily data quality checks reducing manual QA time by 15 hours per week
- Supported Looker dashboard builds for the Growth and Marketing teams

SKILLS

SQL, Python, dbt Core, BigQuery, Airflow, Looker, Google Cloud Platform, Dataflow, Informatica, Git

EDUCATION

B.Tech Information Technology, VIT University, 2018

Company: Databricks
Role: Senior Data Engineer
Location: San Francisco, CA (Hybrid)

About the Role

We are looking for a Senior Data Engineer to join our Data Platform team. You will own the design and reliability of core data pipelines that power product analytics, revenue reporting, and ML feature engineering across Databricks.

Responsibilities

- Design, build, and maintain scalable data pipelines using dbt and Apache Spark
- Own data quality frameworks and SLA monitoring for critical business datasets
- Partner with analytics engineers and data scientists to model and deliver reliable data products
- Drive cost optimization initiatives across our Databricks Lakehouse environment
- Mentor junior engineers and contribute to team technical standards

Required Skills

- SQL, Python
- dbt Core or dbt Cloud
- Apache Spark or PySpark
- Experience with a cloud data warehouse (Databricks, BigQuery, Snowflake, or Redshift)
- Strong understanding of data modeling principles
- Git and CI/CD for data pipelines

Preferred Skills

- Databricks Lakehouse platform
- Delta Lake
- Airflow or similar orchestration tool
- Experience with ML feature stores
- Familiarity with data contracts

Salary: \$160,000 - \$190,000
